

TIC: Aprendizaje 2 Actividad 2

Josefina Porolli

<https://www.internetworldstats.com/links10.htm>

Key words:

1. Disadvantage: people who live in the "bad side" of the gap are often there because of a wide range of disadvantages (aspects) that don't allow them to have enough access and skills for new technologies.
2. International context: there are countries that are much more developed than others in this aspect.
3. Transformation: ICTs, as they transform themselves, they transform societies by improving our understanding and connecting us with other people, as well as changing our habits and lifestyle.
4. Economic growth: information technologies in general tend to be associated with productivity improvements.
5. Free speech: new technologies are here nowadays, in part, to achieve free speech, so that populations can communicate to the rest of the world, but this isn't possible in some countries as some platforms and governments censor all posts against them.

Mind map:

With Fran martin

Similar aspects

Both agree on the big importance of digital inclusion.

Both take into account the aspects about universal connection and free speech with reliable information.

Both agree to change common aspects in daily life in order to make it easier.

Differences

Fran's text talks about one specific global project for bridging the gap, while Jose's talks about the digital divide in general, taking into account different aspects that can be described also as arguments for bridging the gap, and suggests different options, but does not describe a specific project.

Reasons the authors had to write the text:

Both authors had the intention of informing about this gap, but, while Jose's text only presents arguments for bridging the gap and describes different aspects, Fran's text promotes a global project of a platform that will try to reduce all the digital global gaps at once.

At the same time Jose's text information is essential to understand and know what Fran's text is about.
